

TOEFL iBT Home Edition

1. Confirm your computer meets equipment requirements

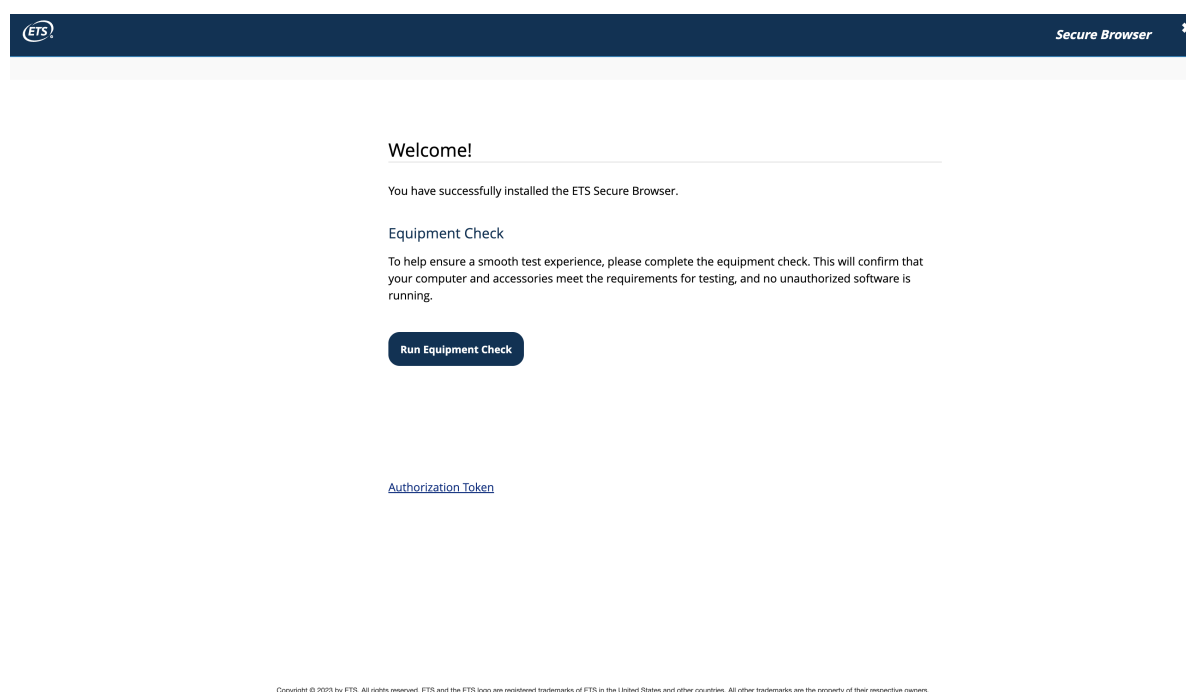

Download the ETS Secure Browser by selecting one of the links below.

- [Download the Mac[®] OS version](#)
- [Download the Windows[®] version](#)

Then run the file to complete the installation. While in the browser, click the Equipment Check button to confirm that your equipment is ready for test day.

2. How to run equipment check with screenshot

- Once you open the ETS Secure Browser, you' ll be brought to this welcome screen. From here, you can run the Equipment Check.

- Upon completion of the Equipment Check, you' ll see the status of your equipment. If any parts have failed, you' ll see a red triangle status indicator, as well as tips for how to resolve the problem.

The equipment check includes a bandwidth check. Since bandwidth differs depending on time of day and network usage, run the equipment check at several different times to see which time works best. Additionally, you should run the check on the same day of the week and at the same time of day as your test. That way, you're checking your bandwidth in an environment similar to what you would experience when you test

Equipment Check Failed

Your system did not pass the equipment check. See below to identify the problem. Visit [equipment check support](#) for additional assistance.

Retest

Go To Log In

Webcam

Property Name	Result	Status
Camera	FaceTime HD Camera (1C1C:B782)	✓
