Contoh soal:

Scrip (Anda akan membaca teks percakapan di dalam layar.)

Narrator: Questions 31-33 are based on a dialogue between a man and a woman.	
Woman:	Excuse me, Professor, are you available for today's academic supervision?
Man:	Yes, I'm free now. How can I assist you?
Woman:	Well, I need some guidance for my thesis. I'm finding it challenging to finalize my topic.
Man:	That's a common concern among students. Have you considered consulting with your professors more frequently?
Woman:	Yes, I have, but I'm still unsure about the direction. I feel like I'm lacking advanced knowledge in my field.
Man:	It's normal to feel that way. An advanced understanding takes time. Have you thought about expanding your research to include different perspectives?
Woman:	I haven't considered that. Could you provide me with some examples?
Man:	Certainly. For instance, you could examine the impact of new teaching methods on student performance. This would require analyzing the curriculum being implemented.
Woman:	That sounds interesting. But I'm concerned about the workload. It seems like it would require a lot of effort.
Man:	It will indeed require effort, but it will also make you a well-rounded researcher. Remember, the effort you put into your thesis now will benefit you in the future.
Woman:	I guess you're right. I want to make sure my thesis is of high quality and contributes to my field.
Man:	That's a commendable goal. It's important to remember that your thesis is an opportunity for you to demonstrate your expertise and make a valuable contribution.
Woman:	Thank you for your advice. I feel more confident now and I'm ready to take on

	the challenge.
Man:	You're welcome. I'm glad I could help. Remember, don't hesitate to seek assistance when needed. Good luck with your thesis!
Woman:	Thank you, Professor

Skrip (Anda akan membaca teks monolog di dalam layar.)

Speaker:

Welcome to the new members of this investment club. Today we will talk about the basics of investment.

Investing is an action you take with your money to make it grow. There are many things you could invest your money in. Some popular options for investing are stocks, bonds, and real estate, all of which help your money grow. When you put your money in these avenues they become your investments.

On average, the stock market provides a return of around 11% per year over the long term. If you invested \$5000 in the stock market today, then in 20 years, you would have around \$40,000. And in 30 years, you'd have well over a hundred thousand dollars. All from just the original 5000 dollars. That's the power of investing. You could turn \$5000 into well over \$100,000.

What's more... There is a common misconception that you need a lot of money to start investing. But that couldn't be farther from the truth. Even if you set aside just one dollar every day for investment, that money could grow into over seventy thousand dollars in thirty years. To conclude, always be careful with companies you invest with, always research the company before investing, and always be a smart investor.

READING

Instruksi soal:

Pada bagian reading, anda akan mendapati sebuah teks dan sepuluh pertanyaan yang berdasarkan pada teks tersebut. Jawablah pertanyaannya dengan memilih pilihan A, B, C, atau D.

Contoh Teks:

Glass fibers are extremely strong; for their weight, they are stronger than steel. **They** are made by forcing molten glass through tiny holes called spinnerets. As many as four hundred spinnerets are placed together, and threads of glass much thinner than human hairs are drawn off at great speed-miles of thread per minute.

As they speed along, the threads are coated thinly with a type of glue and twisted into a yarn. The glass fibers are used with plastics to make boats and car bodies. They are also woven into heavy cloth for window draperies and into strong belts for making tires stronger.

A **special** kind of glass fiber is causing a revolution in communications. A signal of light can be made to travel along the fiber for very long distances. By **changing** the quality of the light, many messages can be sent at once along one strand of glass.

New office buildings are being "wired" with glass fibers as they are built. The glass fibers will be used to connect telephones and computers in ways that not long ago were either impossible or too expensive.

Glass wool traps air in a thick, light blanket of fibers. This blanket is then put into walls and ceilings to keep warm air in during the winter and cool air in during the summer.

To make glass wool, molten glass is **fed** into a spinning drum with many holes in **it**. As the glass threads stream out of the holes, they are forced downward by a blast of hot air and through a **spray** of glues. The threads are then further blown about to mix them up as they fall in a thick mat on a moving belt. The glass we see through and drink out of has many, many other uses besides the ones described here.
